Elementor has a drag-and drop interface that makes it easy for users to create and customize their websites designs.Elementor has a variety of widgets that can be added to pages and customized, including text, images, buttons, and more.Elementor can be integrated with other WordPress plugins, such as WooCommerce and Mailchimp, to add additional functionality to websites.

2. Royal elementor addons/depicter.

Royal Elementor Addons offers more than 60 widgets that can be added to your Elementor pages, including forms, sliders, carousels, and more.

3. Woocommerce

WooCommerce is a popular e-commerce plugin for WordPress that allows website owners to easily add online store functionality to their site.

Key points of Woocommerce :- Free and open source,extensible with plugins, Themes and design, Payments gateways and Shipping options.

4. Dokan

Dokan is a WordPress plugin that allows you to create a multi-vendor marketplace website.Dokan comes with various widgets and shortcodes that you can use to display vendor information, product listings, and more.

5. Menu icon

The menu icon in WordPress refers to the three horizontal lines (also known as the "hamburger icon") that are typically located in the top left or top right corner of a website's header or menu.

6. Razorpay for woocommerce

The Razorpay payment gateway can be easily integrated with the WooCommerce plugin using the Razorpay for WooCommerce plugin.

7. Food store

Food stores should have product descriptions and images for each of the items you are selling.

8. WooCommerce recently visited

Ui-Ux Design of Dabba project

1)Fronts

1. Rubik :- for title names of mess/tiffin
2. PT Sans :- for description of mess
3. Source Sans Pro :- use for about us page
4. Inter :- use for header and footer

2)Color

1. Header - **#fcfdff**

The color code #fcfdff is a very light shade of blue, almost appearing as pure white. This color 'light shade of blue' is used for Header.

It is commonly referred to as "ghost white" or "frost white." It used to create a calming and soothing atmosphere and is commonly used in web design and branding as a background color to make other colors pop.

2. Header border - **#ff9d3b**

The color code #ff9d3b is a bright and vibrant shade of orange. It has a high intensity and is quite saturated, meaning it appears bold and vivid. This color is often associated with positivity, creativity, and confidence. It used to draw attention to a particular element or to add a pop of color to a design or project. So we used it for header borders.

3. Footer- **#23243b**

The color code #23243b is a dark, rich shade of blue-gray. It has a low saturation, meaning it appears subdued and understated. This color is often associated with sophistication, mystery, and depth. It is a popular color choice for websites, logos, and branding materials where a more subdued and serious tone is desired. For this reason we used this color at the bottom of the page.

4. Front color- **#000000**

The color code #000000 represents pure black, the absence of any color. It is the darkest possible color and has a complete absence of light. It can be used to create contrast in a design. It is a popular color choice for typography and branding materials.
